UNDERSTANDING THE ROLE OF TECHNOLOGY IN K-6 STUDENT LEARNING

STUDENT PERSPECTIVE QUESTIONS

A DISCUSSION WITH YOUR FAMILY

As partners in education, we invite you to ask your child(ren) the following questions about their experience at school and using technology. This worksheet helps you record their responses ahead of completing the online survey.

Note: If you are responding for more than 1 FSD student, help us differentiate their thoughts by indicating the grade level of the student with their response.

Example: Grade 2: I love learning in the learning commons and being with my friends at school. Grade 4: I like using Matific to test my math skills and using a reading coach on the computer.

1. **What helps you pay attention and feel ready to learn at school?**

2. **When are you most excited to learn?**
   If your child is unsure, examples you can provide include: creating a picture or project with your hands, exploring or playing games outside, reading or researching with books, conducting experiments or testing a new skill, reading or researching using online tools, playing learning games on a computer, collaborating with friends

3. **When do you use a tablet or Chromebook in class? Can you share if or how it helps you to learn?**
   Be as specific as possible. Also include any observations your child has about using a device or program to learn.

4. **What do you like/value most about being at school?**
   This helps us to understand how a learner experiences school so we can keep it in mind for future decision making.
